

Syed Rafiuddin Aaqib

AI Solutions & Implementation Analyst | Data-to-AI Product Transition

Miami, FL | aaqibsyed3@yahoo.com | 947-240-5517 | github.com/aaqibsyed412 | linkedin.com/in/syed-rafiuddin-aaqib-b46645191

Authorized to work in the U.S. (W2) | Available immediately

PROFESSIONAL SUMMARY

Business intelligence professional with 5+ years turning fragmented data into measurable outcomes, transitioning into AI implementation and solutions roles. Combines SQL, Python/API automation, Snowflake, and Power BI with hands-on AI-assisted development — architected and shipped Momentum, a multi-agent AI payments platform, with Claude and Manus AI. Cut fraud-alert review time an estimated 30% with Python automation.

TECHNICAL SKILLS

- AI and AI-Assisted Development:** Claude, Claude Code, Manus AI, ChatGPT, Gemini, Perplexity, Snowflake Cortex, Whisper speech-to-text, structured LLM intent parsing, multi-agent design, agentic guardrails, explainability logging, human-in-the-loop validation
- Programming and Data:** Python (pandas, NumPy, scikit-learn), TypeScript, Node.js, SQL (T-SQL, PostgreSQL, SQL Server), Snowflake, dbt, APIs (Express, tRPC), data validation, statistical modeling
- Business Intelligence and Reporting:** Power BI (DAX, Power Query, data modeling), Tableau, Excel (PivotTables, XLOOKUP, VBA, macros), KPI design, semantic reporting
- Engineering Workflow:** Git/GitHub, CI/CD (GitHub Actions), React, Drizzle ORM, MySQL/TiDB, Tailwind CSS, OAuth, automated testing, production deployment
- Implementation and Collaboration:** Requirements elicitation, BRDs, user stories, UAT, Agile/Scrum, Jira, stakeholder communication, technical documentation

PROFESSIONAL EXPERIENCE

Wise I.T. Inc

AI Solutions Analyst

Detroit, MI

Jan 2026 – Sep 2026

- Led discovery with 12+ stakeholders across Finance, Operations, and Technology, identifying 6 high-priority AI automation opportunities; wrote 30+ user stories, process maps, business rules, and acceptance criteria.
- Supported deployment of an AI document workflow (classification, extraction, validation, exception routing); designed and ran 45+ UAT scenarios and tracked defects to resolution.
- Analyzed 100K+ records across 5 sources in SQL and Excel to find data-quality gaps; built Power BI dashboards for volume, turnaround, and exception rates and training materials for 50+ users.

Endeavor Solutions Private Limited

Business Intelligence Analyst

Remote

Mar 2024 – Mar 2025

- Inherited a legacy reporting pipeline of fragmented SQL across SSMS and Snowflake; consolidated historical transactional tables, cutting data load times by 35%.
- Identified a manual bottleneck in the fraud team's alert triage process; built a Python API workflow automating initial review of low-risk alerts, cutting manual review time by an estimated 30%.
- Built Power BI reports with DAX measures, cutting fee-discrepancy investigation time by an estimated 25%; partnered on A/B tests contributing to an estimated 8–10% conversion lift.

Starfield Communications and Information Technology

Business Intelligence Analyst

Remote

May 2022 – Feb 2024

- Scoped an IT modernization initiative for an insurance client; led requirements elicitation, authored BRDs, and tracked milestones in Jira under Agile (Scrum) through a successful go-live.
- Rebuilt SQL-driven reporting and claims segmentation, cutting ad hoc reporting turnaround from days to hours and helping the client nearly double daily claims throughput after go-live.

Starfield Communications and Information Technology

Data Analyst

Remote

Jan 2020 – Jan 2022

- Configured automated ETL flows in Power Query, cutting data prep time by an estimated 40%; automated ERP reporting with Power Automate, eliminating a manual process.
- Led quantitative cost analysis in Excel for a \$1.2M security infrastructure overhaul, enabling leadership to negotiate final scope down by an estimated 10–15%.

SELECTED AI AND TECHNICAL PROJECTS

Momentum — Unified AI Payments Platform

2026

Personal project | React, TypeScript, Node.js, Express, tRPC, Drizzle, MySQL/TiDB, Whisper, LLM structured outputs | Built with Claude and Manus AI

- Architected a unified AI payments platform (simulated P2P/merchant QR-NFC payments, bill intelligence, commute guidance, explainable agent actions) using Claude for planning, then directed Manus AI to build and deploy it.
- Designed a three-agent architecture (voice assistant, bill-plan advisor, commute agent) sharing a typed API, persistence layer, notifications, and an audit trail.
- Implemented Yuna, a voice assistant using real speech-to-text and structured LLM intent parsing to extract payment actions; built AI guardrails with threshold checks, 48-hour escalations, and explainability logs; enforced PIN/biometric confirmation on every transaction.

Market Intelligence Platform

2026–Present

Personal project | Python, PostgreSQL, yfinance, pytest, GitHub Actions, dbt (in progress) | Built with Claude and Claude Code

- Engineered a Python OHLCV equity collector with pytest coverage and PostgreSQL persistence (conflict-aware upsert logic); built a working GitHub Actions CI pipeline running automated and DB integration tests on every change.

Crypto AML: Illicit Transaction Detection and Testing

2026

- Engineered a logistic regression classifier (pandas, scikit-learn) achieving 93% recall on a severely imbalanced (2%) fraud problem across 200,000+ Bitcoin transactions; beat a 76% recall rules-based baseline by 12 points, confirmed significant via McNemar's test ($p \approx 3e-56$).

EDUCATION

Lawrence Technological University — M.S. Information Technology

Jan 2024 – Jan 2026

Osmania University — B.E. Electronics and Communications

Aug 2019 – Jun 2023
